PLANT SCIENCE – Plant scientists use their curiosity and knowledge to develop questions about the world of plants. Then they try to answer those questions with further observations and experiments in the laboratory and in the field. Scouts will explore three of the most important plant science specialties: agronomy, horticulture, and field botany.

FISH & WILDLIFE MANAGEMENT – Wildlife management is the science and art of managing the wildlife—both animals and fish—with which we share our planet. Maintaining the proper balance and the dynamics that go with it requires humankind’s attention. We use this stewardship tool to help minimize or eradicate the possibility of extinction of any given species.

ANIMAL SCIENCE – Cattle, horses, sheep, goats, hogs, poultry, and other domesticated animals are important to people for many reasons. They supply us with food and clothing, we use them for recreational purposes; domestic animals work with and for us.

VETERINARY MEDICINE – The field of veterinary medicine in the 21st century is one of the most exciting medical professions in which to work. The skills of a veterinarian are practiced with cutting-edge technology and treatment options, and the profession offers a wide range of career choices.

SALESMA NSHIP – By studying salesmanship, Scouts can learn self-confidence, motivation, friendliness, and the persistence necessary to overcome obstacles and solve problems. Sales can offer a challenging and rewarding career for those who enjoy interacting with people.
